Optional Equipment available:

- Powered swivel for turning the seat at the top to get on and off
- Powered folding footrest so the user does not have to bend over to fold the footrest up or down

The Freecurve uses a readily available, industry standard battery. Some national retailer's curved lifts use a proprietary battery. This makes them your only option for service, which can lead to exorbitant service costs.

All equipment installed by experienced Options HME Technicians includes a one year warranty on labor. After that first year, Options HME will be there, should your equipment need service - **just like we have, since 2007.**

Handicare has been manufacturing stair lifts since 1986. The innovative Freecurve design was introduced in 2001.
